Wolverton

Project
Suspended Span
Arms feature

Project Value
£40,000

At Wolverton Swimming & Fitness Centre an interactive play zone was installed based on Hippo's suspended span arms features. The aim of the installation is to increase revenue at the centre by encouraging visitors to use the pool outside of teaching sessions by appealing to young children and pre-teens.

Two 7m span arms were suspended over the pool, each with a number of different features including shark showers, tipping buckets and water wheels. These provide a strong visual impact and plenty of surprise and anticipatory play. To encourage water confidence in toddlers a 4m snake squirt was installed on the poolside along with a selection of interactive play panels. The play panels create high visual impact and provide an educational element to play.

The features have been designed to be installed around the outside of the pool without impacting on other uses of the pool such as swimming lessons. There are a total of 40 active water points.

Project
Teaching Pool
Splash Zone

Project Value
£20,000

At Cefn Fforest Leisure Centre Hippo transformed the teaching pool into an interactive play area that will appeal to children of all ages and abilities, without affecting normal pool uses. The aim of the installation is to increase revenue at the centre by encouraging pool usage outside of teaching sessions. Features are based on Hippo's unique Splash Zone toys.

Ten interactive play panels were mounted over the pool channels at water level on both sides of the pool. The panels feature a wide variety of games and activities while providing visual, auditory and tactile stimuli. A 6m interactive span pipe will run at high level along the pool wall, and will squirt water out over the poolside, creating a water arch effect. Six floatables were included and are ideal for fun sessions, with easy removal from the pool afterwards.
