

It's been great to work with the team from Hippo Leisure. From the initial idea stage through to planning the work and launching an array of features at our opening party, their service, advice and guidance has been excellent. The team at Hippo clearly understood all aspects of the project from our point of view including developing the right features based on ours and customers' needs, working with on-site technical staff and being sensitive to our existing pool programme and users during the installation. I have received a massive amount of positive feedback from our swimmers and the pool has been packed since the opening. We are already thinking ahead to what we can do next!

Chris Hall, Centre Manager, Magnet Leisure Centre

Interactive Water Feature Options

Hippo allows you to become involved in the design process by choosing from our extensive range of interactive water feature options. If you don't see a feature in a design you like, Hippo will do their best to design it for you!

Choose from the following options

PF001 Large Water Wheel

The wheel is propelled via a water jet spinning water in several directions.

PF002 Small Water Wheel

The wheel is propelled via a water jet spinning water in several directions.

PF003 Large Tipper Bucket

The bucket is gradually filled with water via a jet. When a critical fill level is reached the bucket is forced to tip, splashing water onto those below.

PF004 Small Tipper Bucket

The bucket is gradually filled with water via a jet. When a critical fill level is reached the bucket is forced to tip, splashing water onto those below.

PF005 4 Tipping Buckets

The buckets are gradually filled one after the other with water via jets. When critical fill levels are reached the buckets are forced to tip, splashing water onto those below at varying time intervals.

PF006 Interactive Themed Shower

The shower provides great visual impact while gently showering those below. Various themes are available including a Shark and Whale.

PF007 Pipe Falls Arm

Water spurts/squirts/jets/gushes from the end of the arm creating a water arch.

PF008 Spray Rail Arm

A series of nozzles along the arm create a water curtain effect.

PF009 Interactive Water Squirt Pelican

The Squirt provides great visual impact while gently showering those below.

PF010 Spray Rail

Sprays water to create a water curtain. The flow of water to the jets along the spray rail can be manipulated by covering them up.

PF011 Water Arch

An arch featuring a variety of water features such as tipping buckets and water wheels which will surprise children by tipping or spraying water over them as they swim underneath.

PF012 Large Tipping Bucket with Splash Board

The bucket is gradually filled with water via a jet. When a critical fill level is reached the bucket is forced to tip, splashing water onto the splash board which disperses the water over a wide area and onto those below.

PF013 Extra Large Splash Bucket with Splash Board

The bucket is gradually filled with water via a jet. When a critical fill level is reached the bucket is forced to tip, splashing water onto the splash board which disperses the water over a wide area and onto those below.

PF014 Barrel Falls

The bucket is gradually filled with water via a jet. When a critical fill level is reached the bucket is forced to tip, splashing water into the barrel where it disappears and then shoots out of hidden pipes around its base.

ST011 Mini Mast

Water spurts out of the Mast and is ideal for channelling water to features such as Interactive Water Channels.

ST007 Water Cannons

Ideal for creating a Splash Battle Zone where children can shoot jets of water from Cannons to hit targets, fill buckets and spin water wheels.

PF015 Tipping Channel

When the bucket fills with water children can tip the trough, dispersing water into the pool below.

I like the water cannons best because you can shoot people!
Flo, Aged 11
